

# Post—Dr. K Addendum

Dr. R. K. Matheson  
Department of Geometry, Cambridge

## Abstract

After the dust settled, one final note seemed appropriate. The geometry still stands—just on slightly less ground than it thought.

The conversation began with coordinates and ended with perspective. No new symbols are required; a single omission was enough. When a framework corrects itself, the equation doesn't explode—it quietly rebalances.

Call this a checksum for the 2020s: the system ran a self-test and caught a rounding error in its own axioms. Nothing broke; precision just got a patch.

So here it is—short, square, and signed in plain text. Proof that even in mathematics, version management matters.
